[Received 15 Dec 2005]

Abstract

Condensation of benzil (**1**) with urea, monophenyl urea and diphenyl urea in the presence of absolute ethanol using 30% aqueous NaOH gave the products **1a**, **1b** and **1c** respectively and also with thiourea, monomethyl thiourea, dimethyl thiourea and diethyl thiourea the products **2a**, **2b**, **2c** and **2d** were obtained. Methylation of the product, **2a** in the presence of dimethyl formamide (DMF) using K_2CO_3 formed **2**. The compounds **1b**, **1c**, **2b**, **2c** and **2** showed highly cytotoxic activity and the compounds **1a**, **2a**, **2d** showed relatively low cytotoxic activity against brine shrimp lethality bioassay.

Key words: benzil; cytotoxicity; hydantoin; thiohydantoin

Introduction

Several types of substituted isatin heterocyclic derivatives were synthesized and found cytotoxic activity of these compounds by screening tests (Islam et al., 2001a; Islam et al., 2001b; Lingcon et al., 2001). Methyl and bromine groups in the ben-zene ring of isatin, Δ^2 -1,3,5-thiadiazolines show more cytotoxic activity. For this interest, the title compounds have been synthesized for screening tests whether they show reasonable lethal effect on brine Shrimp or not. We report to see herein the results of the synthesis of the mentioned compounds (**Scheme 1**), spectral characterization and their cytotoxic effects by brine shrimp lethality bioassay (Anderson et al., 1999).

Methods and Materials

Melting points are not corrected. IR spectra recorded on a Shimadzu DR 8001 FT-IR spectrometer, NMR spectra on a WP 200 spectrometer using TMS as internal standard and mass spectra on an MS Kratas mass spectrometer.

Preparation of mono- and diphenyl urea: Monophenyl urea and diphenyl urea were prepared from aniline hydrochloride and urea following the reported procedure (Furniss et al., 1998).

Preparation of 5,5-Diphenylhydantoin (1a) (Muccioli et al., 2003): Benzil, **1** (0.80 gm, 3.81 mmol/l) was placed in a 100-ml round-bottomed flask with urea, (0.40 gm, 6.69 mmol/l) in the molar ratio of ca 1:2. Absolute ethanol (12 ml) and 30% aqueous sodium hydroxide (2.50 ml) were added to these reactants. Boiling chips were also added to this solution and a condenser was

attached after wrapping the ground glass joint with Teflon tape, and was heated (110-120°C) the mixture under reflux (2 hrs). The reaction mixture was cooled before adding 15 ml of water. The solution was not clear, so the suspended solids were removed by filtration. Then the clear solution was cautiously acidified with concentrated hydrochloric acid and the product was collected by vacuum filtration and washed thoroughly with water.

Then the product, **1a** was recrystallized by ethanol, dried, the m.p. 294-295°C and yields 0.750 gm (80%). **IR:** ν^{Nujol} (cm⁻¹) 3271 (s, ν N-H amide,

CO-NH-CO); 3204 (s, ν N-H amide, CO-NH-CPh₂); 3055 (m, ν C-H aromatic); 1772 (s, ν C=O amide, NH-CO-CPh₂); 1741 (s, ν C=O amide, NH-CO-NH); 1597, 1541, 1508 (s, ν C=C, aromatic). **¹H-NMR** (DMSO): δ 10.10 (s, 1H, NH, CO-NH-CO); δ 9.10 (s, 1H, NH, CO-NH-CPh₂); δ 7.80-7.00 (m, 10H, C-H, aromatic). **¹³C-NMR** (DMSO): δ 175.19 (C-4); δ 156.36 (C-2); δ 140.27 (C-6); δ 128.87 (C-7); δ 128.39 (C-8); δ 126.93 (C-9); δ 70.56 (C-5). **Mass:** m/z (% of relative intensity) 252 (M⁺ 3%), 176 (30%), 154 (100%), 128 (3%), 77 (15%), 51 (8%), and

Scheme 2

39 (10%). The molecular ion peak appears at m/z 252 due to $C_{15}H_{12}N_2O_2$.

Preparation of 3,5,5-Triphenyl hydantoin (1b): Benzil, **1**; (0.148 gm, 0.70 mmol/l) and the monophenylurea; (0.298 gm, 1.40 mmol/l) in the molar ratio of ca 1:2 were refluxed in the absolute ethanol and the procedure for **1b** was similar to that of the compound, **1a**. The product, 1-a1 was colorless solid; m.p. 172-173°C having yields 0.077 gm, 50%. **IR:** ν^{Nujol} (cm^{-1})

3220 (s, ν N-H amide); 3055 (m, ν C-H aromatic); 1716 (s, ν C=O amide, NPh-CO-C-Ph₂); 1637 (s, ν C=O amide, NH-CO-NPh); 1595, 1541, 1508 (ν C=C, aromatic). **¹H-NMR** (DMSO): δ 9.40 (s, 1H, NH, amide); δ 7.80-7.40 (m, 15H, C-H, aromatic). **¹³C-NMR** (DMSO): δ 173.06 (C-4); δ 154.32 (C-2); δ 141.99 (C-10); δ 140.60 (C-6); δ 129.05 (C-7) δ 128.30 (C-8); δ 127.97 (C-9); δ 127.33 (C-12); δ 121.53 (C-13); δ 117.70 (C-11); 68.70 (C-5). **Mass:** m/z (% of relative intensity)

328 (M⁺ 3%), 176 (25%), 154 (100%), 136 (68%), 120 (12%), 55 (27%), 43 (26%). The molecular ion peak appears at m/z 328 due to C₂₁H₁₆N₂O₂.

Preparation of 1,3,5,5-Tetraphenyl hydantoin (1c): Benzil **1**; (0.148 gm, 0.70 mmol/l) and the above 1,3-diphenylurea, **a3**; (0.298 gm, 1.40 mmol/l) in the molar ratio of ca 1:2 were refluxed in the absolute ethanol and the procedure of **1c** was similar to that of the compound, **1a**. The product, **1c** was off white powder. It was recrystallized in methanol, dried and m.p. 163-165°C and yields were 0.070 gm, 42%. **IR:** ν^{Nujol} (cm⁻¹) 3110 (w, ν C-H aromatic); 1716 (s, ν C=O amide, NPh-CO-CPh₂); 1635 (s, ν C=O amide, NPh-CO-NPh); 1595, 1541, 1508 (ν C=C, aromatic). **¹H-NMR** (DMSO): δ 7.20-6.70 (m, 20H, C-H, aromatic). **¹³C-NMR** (DMSO): δ 173.10 (C-4); δ 154.25 (C-2); δ 141.88 (C-10); δ 140.60 (C-6); δ 139.88 (C-14) δ 129.33 (C-7) δ 128.71 (C-8); δ 127.99 (C-9); δ 127.38 (C-12); δ 127.26 (C-13); δ 127.12 (C-16) δ 121.60 (C-17); δ 117.73 (C-11); δ 109.48 (C-15) δ 69.50 (C-5). **Mass:** m/z (% of relative intensity) 404 (M⁺ 3%), 369 (75%), 347(68%), 302 (15%), 259 (7%), 233 (12%), 211 (100%), 182 (92%), 136 (29%), 93 (41%). The molecular ion peak appears at m/z 404 due to C₂₇H₂₀N₂O₂.

Preparation of 5, 5-Diphenyl-2-thiohydantoin (2a): The compound, **2a** was prepared from Benzil, **1**; (0.80 gm, 3.81 mmol/l) and thiourea; (0.58 gm, 7.63 mmol/l) following the procedure of **1a**. The product was recrystallized in ethanol, m.p. 234-235°C yielded 0.595 gm, 94%. **IR:** ν^{Nujol} (cm⁻¹) 3255 (s, b, ν N-H amide, CO-NH-CS); 3135 (b, ν N-H, amide, CPh₂-NH-CS); 3010 (s, C-H aromatic); 1749 (s, ν C=O amide); 1558, 1541, 1508 (ν C=C, benzene); 1215 (s, ν C=S). **¹H-NMR** (DMSO): δ 7.80-7.60 (m, 10H, C-H, aromatic), δ 1.10-1.12 (1H, SH). **¹³C-NMR** (DMSO): δ 181.65 (C-4); δ 175.54 (C-2); δ 138.70 (C-6); δ 129.13 (C-7); δ 128.80 (C-8); δ 126.92 (C-9); 73.92 (C-5). **Mass:** m/z (% of relative intensity) 268 (M⁺ 12%), 182 (18%), 154 (100%), 136 (59%), 120 (12%), 107 (19%), 77

(17%), 57 (27%), 43 (23%). The molecular ion peak appears at m/z 268 due to C₁₅H₁₂N₂OS.

Preparation of 3-Methyl-5, 5-diphenyl-2-thiohydantoin (2b): Benzil, **1**; (0.84 gm, 4.00 mmol/l) with methylthiourea (0.72 gm, 8.00 mmol/l) in the molar ratio of ca 1:2 were refluxed in ethanol and the procedure for the compound, **2b** is similar to that of the compound, **1a**. The product was recrystallized in ethanol; m.p. 182-183°C having yields 1.0 gm, 94%. **IR:** ν^{Nujol} (cm⁻¹) 3250 (b, ν N-H thiamide); 3110 (s, w, ν C-H aromatic); 2950, 2900 (s, ν C-H, aliphatic), 1716 (s, ν C=O amide); 1595, 1541, 1508 (ν C=C, aromatic); 1215 (s, ν C=S). **¹H-NMR** (DMSO): δ 7.20-6.70 (m, 10H, C-H, aromatic), δ 3.50 (s, 3H, C-H, aliphatic), δ 1.30 (s, 1H, SH). **¹³C-NMR** (DMSO): δ 181.94 (C-2); δ 173.93 (C-4); δ 138.55 (C-6); δ 129.13 (C-7) δ 128.89 (C-8); δ 127.44 (C-9); δ 71.76 (C-5); δ 27.79 (C-10). **Mass:** m/z (% of relative intensity) 282 (M⁺ 100%), 205 (22%), 180(68%), 165 (50%), 121 (7%), 104 (72%), 77 (49%), 59 (6%), 51 (17%), 39 (3%). The molecular ion peak appears at m/z 282 due to C₁₆H₁₄N₂OS.

Preparation of 1,3-Dimethyl-5, 5-diphenyl-2-thiohydantoin (2c): Compound, **2c** was obtained from benzil, **1**; (1.00 gm, 4.76 mmol/l) and 1,3-dimethylthiourea; (1.00 gm, 9.61 mmol/l) in ethanol following the procedure of **1a**. Compound **2c** was obtained as white crystalline solids, m.p. 154-156°C having 0.950 gm, yielded 85%. **IR:** ν^{Nujol} (cm⁻¹) 3030 (s, ν C-H aromatic); 2930, 2858 (s, ν C-H, aliphatic); 1643 (s, ν C=O amide); 1470, 1448 (s, ν C=C, aromatic); 1296 (s, ν C-N); 1126 (s, ν C=S stretching vibration). **¹H-NMR** (DMSO): δ 7.00-6.60 (m, 10H, C-H, aromatic), δ 3.30 (bs, 6H, CH₃). **¹³C-NMR** (DMSO): δ 184.08 (C-2, C-4); δ 137.90 (C-6); δ 127.97 (C-7) δ 127.74 (C-8); δ 127.12 (C-9); δ 95.39 (C-5); δ 33.41 (C-10); δ 30.54 (C-11). **Mass:** m/z (% of relative intensity) 296 (M⁺ 100%), 224 (23%), 209(13%), 176 (10%), 154 (31%), 136 (45%), 105 (56%), 91 (13%), 77 (14%), 43 (12%). The molecular ion peak appears at m/z 296 due to C₁₇H₁₆N₂OS.

Preparation of 1,3-Diethyl-5, 5-diphenyl-2-thiohydantoin (2d): Refluxing of benzil, **1**; (0.84 gm, 4.00 mmol/l) and 1,3-diethylthiourea; (1.06 gm, 8.00 mmol/l) and the following procedure of **1a** gave the product **2d**. The product was recrystallized in ethanol, m.p.116-117°C having yielded 0.297 gm, 45%. **IR:** ν^{Nujol} (cm^{-1}) 3110 (w, $\nu\text{C-H}$ aromatic); 2990, 2830 (s, $\nu\text{C-H}$, aliphatic); 1716 (s, $\nu\text{C=O}$ amide, NPh-CO-C-Ph₂); 1635 (s, $\nu\text{C=O}$ amide, NPh-CO-NPh); 1595, 1541, 1508($\nu\text{C=C}$, aromatic).

¹H-NMR (DMSO): δ 7.00-6.80 (m, 10H, C-H, aromatic), δ 3.60 (q, 2H, ¹¹CH₂), δ 3.30 (q, 2H, ¹³CH₂), δ 1.20 (t, 6H, CH₃). **¹³C-NMR** (DMSO): δ 183.31 (C-2); δ 183.21 (C-4); δ 140.07 (C-6); δ 128.17 (C-7); δ 127.97 (C-8); δ 127.83 (C-9); δ 99.62 (C-5); δ 96.54 (C-11); δ 96.28(C-13); δ 14.85 (C-12); δ 14.43 (C-14). **Mass:** m/z (% of relative intensity) 324 (M⁺ 12%), 194 (28%), 165(19%), 150 (55%), 121 (12%), 105 (100%), 86 (9%), 77 (50%), 51 (5%), 29 (21%). The molecular ion peak appears at m/z 324 due to C₁₉H₂₀N₂OS.

Preparation of S-Methyl-5, 5-Diphenyl-2-thiohydantoin (2) (Muccioli et al., 2003): The compound, **2a** (0.200 gm, 0.71 mmol/l) was dissolved in anhydrous DMF (0.70 ml) and K₂CO₃ (0.41 gm, 0.31 mmol/l) then iodomethane (0.70 ml, 0.71 mmol/l) were added to this mixture and stirred overnight at room temperature. The mixture was poured into distilled water. The resulting precipitate was collected, dried and recrystallized from ethanol (If some of K₂CO₃ are non-reacted then hot ethanol solution of product is filtered to separate K₂CO₃ from the product) the product, **2**. The yields of the product, **2** were 0.75 gm, 38% having m.p.172–174°C. **IR:** ν^{Nujol} (cm^{-1}) 3240 (w, $\nu\text{N-H}$, amine); 3010 (s, $\nu\text{C-H}$, aromatic); 2900, 2855 (s, $\nu\text{C-H}$, aliphatic); 1725 (s, $\nu\text{C=O}$); 1684 (s, $\nu\text{C=N}$); 1585, 1506, 1489 ($\nu\text{C=C}$, aromatic). **¹H-NMR** (DMSO): δ 7.40-7.20 (m, 10H, C-H, aromatic), δ 3.20 (s, 1H, NH), δ 2.70 (s, 3H, C-H, aliphatic). **¹³C-NMR** (DMSO): δ 180.36 (C-2); δ 162.42 (C-4); δ 140.80 (C-6); δ 128.72 (C-7); δ 127.97 (C-8); δ 127.14 (C-9); δ 77.94 (C-5); δ 26.87 (C-10).

Mass: m/z (% of relative intensity) 282 (M⁺ 2%) 176 (27%), 165(12%), 154 (100%), 136 (70%), 120 (13%), 107 (19%), 88 (18%), 77 (15%), 51 (5%), 43 (8%). The molecular ion peak appears at m/z 282 due to C₁₆H₁₄N₂OS.

Results and Discussions

Simple base catalyzed condensation of benzil, **1** with urea, monophenyl urea and diphenyl urea in absolute ethanol furnished **1a**, **1b**, **1c** whereas with thiourea, methyl thiourea, dimethyl thiourea and diethyl thiourea gave **2a**, **2b**, **2c** and **2d**. The formation of these products follows the pinacole-pinacoline type (Shukla and Trivedi, 1997) rearrangement that is shown in the **Scheme 2** (e.g., compound, **1a**). The **IR** spectrum of the compound, **1a** at 3271 cm^{-1} indicates the presence of NH group of amide moiety. The other band at 3204 cm^{-1} also indicates the presence of NH in Ph₂C-NH-CO. The clear band at 3055 cm^{-1} shows the presence of C-H stretching vibration of phenyl ring. The lower absorption at 1772 cm^{-1} assigns C=O group of amide in Ph₂-CO-NH-, on the other hand the band at 1741 cm^{-1} corresponds to other C=O group in NH-CO-NH. The bands at 1597 cm^{-1} , 1541 cm^{-1} , 1508 cm^{-1} give the strong support of C=C stretching vibration of phenyl ring. **¹H-NMR** spectrum shows two singlets at δ 10.10 and δ 9.10, which would be assigned for NH proton of amide. The aromatic protons appear as multiplet at δ 7.80-7.00. **¹³C-NMR** spectrum at δ 175.19 (C-4) and δ 156.36 (C-2) is for the carbonyl groups of amide. The aromatic carbons are designated by the following values δ 140.27 (C-6), δ 128.87 (C-7), δ 128.39 (C-8), δ 126.93 (C-9) and at δ 70.56 (C-5). In the **MS** spectrum of the compound, **1a** the molecular ion peak (M⁺ 3%) appears at m/z 252 that corresponding to the molecular formula C₁₅H₁₂N₂O₂. In this spectrum the base peak is formed at m/z 154.

Methylation of 2a with CH₃I in the presence of K₂CO₃ in dry DMF gave the product (2): In the **IR** spectrum of the compound, **2** the sharp band at 3240 cm^{-1} indicates the presence of NH group

of amide. The signal at 3010 cm^{-1} locates the presence of C-H stretching vibration in aromatic. The bands at 2900 cm^{-1} and 2855 cm^{-1} indicate the presence of C-H group for CH_3 . The clear and sharp band at 1725 cm^{-1} is assigned for C=O group. The band at 1684 cm^{-1} indicates the presence of C=N group. The bands at 1585, 1506 and 1489 give the strong support for the presence of C=C stretching vibration in the aromatic ring. In $^1\text{H-NMR}$ spectrum the aromatic protons appear as multiplet at $\delta\ 7.40\text{-}7.20$. The singlet at $\delta\ 3.20$ indicates the presence of NH group and the singlet at $\delta\ 2.70$ is observed for CH_3 group in S- CH_3 . In $^{13}\text{C-NMR}$ spectrum the signals at $\delta\ 180.36$ (C-2) and $\delta\ 162.42$ (C-4) appears for both C=S and C=O groups respectively. The aromatic carbons are designated by the following values) $\delta\ 140.80$ (C-6), $\delta\ 128.72$ (C-7), $\delta\ 127.97$ (C-8), $\delta\ 127.14$ (C-9). The value at 77.94 (C-5) appears

for the aliphatic carbon with various substituted groups. The signal at $\delta\ 26.87$ (C-10) is concerned for simple aliphatic carbon CH_3 . In the MS spectrum the molecular ion peak (M^+ 2%) appears at $m/z\ 282$ that corresponding to the molecular formula $\text{C}_{16}\text{H}_{14}\text{N}_2\text{OS}$. In this spectrum the base peak is formed at $m/z\ 154$.

Cytotoxicity: Cytotoxicity of all the compounds was measured by brine shrimp lethality bioassay method. Cisplatin, a recognized anticancer drug was used as reference to compare the efficacy of the synthesized compounds. Compounds **1a**, **1b**, **1c**, **2a**, **2b**, **2c**, **2d** and **2** showed potential cytotoxicity but compounds **1b**, **1c**, **2b**, **2c** and **2** that showed highly cytotoxic activity and compounds **1a**, **2a**, **2d** showed relatively low cytotoxic activity. The LC_{50} values of the titled compounds are represented in the Figure 1.

Figure 1: Comparative graphical representation of the LC_{50} of toxicity for the synthesized compounds against brine shrimp lethality test
